# Project objectives

Provide actionable information regarding IoT devices which can be processed manually or automatically to ensure cybersecurity of these devices.

Relevant data will be made available through

- European Data Portal (EDP)
- Malware Information Sharing Platform (MISP)
- Shadowserver's free daily remediation feeds

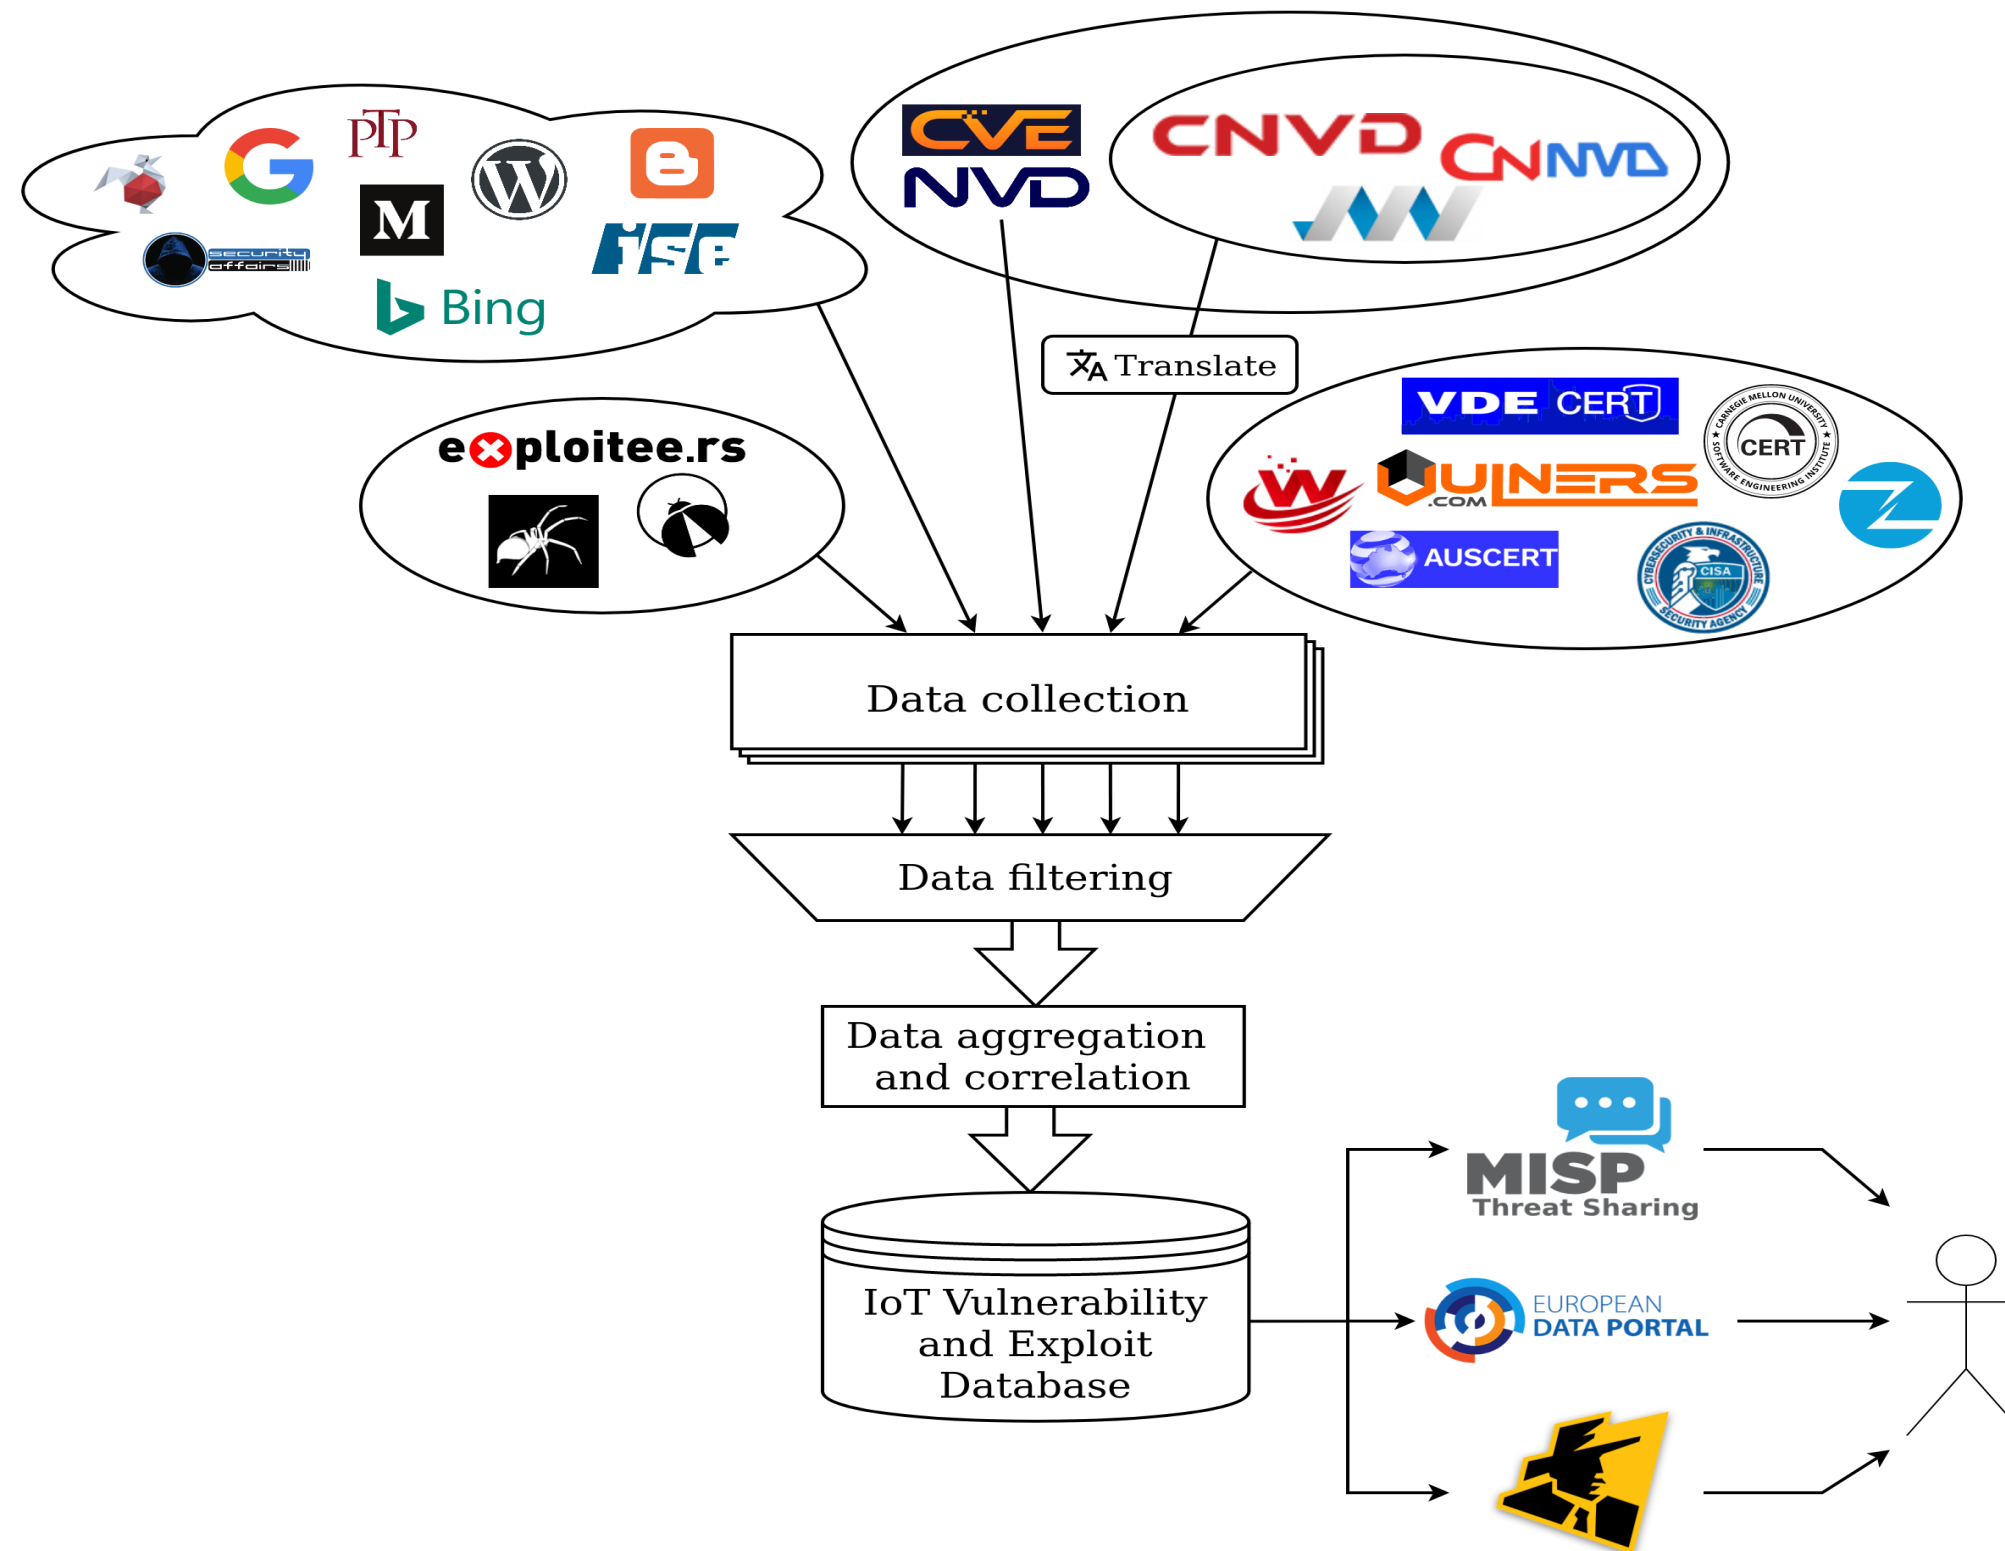

## Main outcomes

- database of information on vulnerabilities and exploits of IoT devices
- mechanisms of correlation of various types of information
- vulnerability information search engine
- catalogue of IoT device types
- catalogue of IoT related malware
- scanning the Internet to identify vulnerable, publicly available IoT devices
- system for Network Anomaly Detection of IoT Devices
- Internet Draft documents describing the open data with its implementation in MISIP
- aggregated and anonymised statistics on infected and vulnerable IoT devices

# Vulnerability database

# Testbed to generate IoT network traffic

## Infected and Exposed IoT device statistics

This is a dataset containing a county level breakdown of infected and Exposed IoT devices detected through sinkholes, honeypots and darknets operated by The Shadowserver Foundation and its partners. The data is GROUPED by IoT related threats. In some cases a vulnerability id is provided as a threat name — this is for cases where an IP was seen...

## IoT security - network traffic under normal conditions - Samsung UE55ES6100

Dataset created under the Connecting Europe Facility of the European Union programme, VARIOT project TENtec n. 28263632. Developed by the Intelligent Systems for Industrial Systems group supported by the Department of Education, Language policy and Culture of the Basque Government. This dataset comprises Samsung UE55ES6100 IoT device network...
